

LAB-3

Provisioning on EC2 Instance on AWS

Step 1: Create Terraform configuration file for EC2 instance

Step 2: Review Plan

```
Command Prompt
C:\Users\hp\terraform>terraform plan

Terraform used the selected providers to generate the following execution
plan. Resource actions are indicated with the following symbols:
+ create

Terraform will perform the following actions:

# aws_instance.lab1[0] will be created
+ resource "aws_instance" "lab1" {
+   ami                        = "ami-0d0b75c8c47ed0edf"
+   arn                       = (known after apply)
+   associate_public_ip_address = (known after apply)
+   availability_zone         = (known after apply)
+   cpu_core_count            = (known after apply)
+   cpu_threads_per_core      = (known after apply)
+   disable_api_stop          = (known after apply)
+   disable_api_termination   = (known after apply)
+   ebs_optimized              = (known after apply)
+   get_password_data          = false
+   host_id                   = (known after apply)
+   host_resource_group_arn    = (known after apply)
+   iam_instance_profile       = (known after apply)
+   id                        = (known after apply)
+   instance_initiated_shutdown_behavior = (known after apply)
+   instance_lifecycle         = (known after apply)
+   instance_state             = (known after apply)
+   instance_type              = "t2.micro"
+   ipv6_address_count         = (known after apply)
+   ipv6_addresses             = (known after apply)
+   key_name                   = (known after apply)
+   monitoring                 = (known after apply)
+   outpost_arn                = (known after apply)
+   password_data              = (known after apply)
+   placement_group            = (known after apply)
+   placement_partition_number = (known after apply)
+   primary_network_interface_id = (known after apply)
+   private_dns                = (known after apply)
+   private_ip                 = (known after apply)
```

Step 3: Apply changes

```
Command Prompt
guarantee to take exactly these actions if you run "terraform apply" now.

C:\Users\hp\terraform>terraform apply

Terraform used the selected providers to generate the following execution
plan. Resource actions are indicated with the following symbols:
+ create

Terraform will perform the following actions:

# aws_instance.lab1[0] will be created
+ resource "aws_instance" "lab1" {
  + ami               = "ami-03f4878755434977f"
  + arn               = (known after apply)
  + associate_public_ip_address = (known after apply)
  + availability_zone  = (known after apply)
  + cpu_core_count    = (known after apply)
  + cpu_threads_per_core = (known after apply)
  + disable_api_stop   = (known after apply)
  + disable_api_termination = (known after apply)
  + ebs_optimized      = (known after apply)
  + get_password_data  = false
  + host_id            = (known after apply)
  + host_resource_group_arn = (known after apply)
  + iam_instance_profile = (known after apply)
  + id                 = (known after apply)
  + instance_initiated_shutdown_behavior = (known after apply)
  + instance_lifecycle = (known after apply)
  + instance_state     = (known after apply)
  + instance_type      = "t2.micro"
  + ipv6_address_count = (known after apply)
  + ipv6_addresses     = (known after apply)
  + key_name           = (known after apply)
  + monitoring         = (known after apply)
  + outpost_arn        = (known after apply)
  + password_data      = (known after apply)
  + placement_group    = (known after apply)
  + placement_partition_number = (known after apply)
  + primary_network_interface_id = (known after apply)
  + private_dns        = (known after apply)
```

Step 4: Verify Resources

Step 5: Cleanup Resources

```
Command Prompt
Apply complete! Resources: 1 added, 0 changed, 0 destroyed.

C:\Users\hp\terraform>terraform destroy
aws_instance.lab1[0]: Refreshing state... [id=i-0e7fc614cc0c8661d]

Terraform used the selected providers to generate the following execution
plan. Resource actions are indicated with the following symbols:
  - destroy

Terraform will perform the following actions:

# aws_instance.lab1[0] will be destroyed
- resource "aws_instance" "lab1" {
